Precipitation probability							
80%	70%	50%	60%	70%	60%	50%	30%

Forecast for Sunday 16 Jul 2023

Weather: Heavy showers, and then more persistent rain, overnight, generally affecting the western half of the park with drier spells in the east. Rain continuing through the morning with the odd heavier burst at times, becoming more showery from midday onwards. The occasional heavy shower likely through the afternoon, as well as the possibility for the odd thunderstorm and hail. Some sunnier spells are likely at times, mainly in the east during the afternoon. Showers easing into the evening.

Chance of cloud-free hill tops above 800m: 20% in the west at first, improving to 70% by midday. 60% in the east at first, improving to 90% through the morning.

Low Cloud and visibility: Extensive low cloud with bases around 300-400m pushes in from the west overnight and through the morning with most western slopes in fog. Eastern slopes fairing somewhat better, but low cloud still likely affecting higher peaks through the morning. Cloud lifting by the middle part of the day for most, perhaps lingering across higher western peaks, but generally staying above summits, although temporarily falling again in showers. Visibility generally very poor through the morning in the west, with some improvement during the afternoon. Eastern areas seeing good visibility away from showers.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Not the wind chill effect at elevation early on in strong and gusty winds. Gusty winds likely continuing through the day, combining with rain and showers to give some fairly treacherous walking conditions at times. High UV levels are forecast, so carrying sun protection is recommended.

Forecast for Monday 17 Jul 2023

Weather: A bright start in places with sunny spells, mainly in the east. Some low cloud shrouding western slopes with some light rain at times. A few showers likely breaking out around midday, but drying off into the afternoon with more prolonged sunny spells developing.

Maximum wind: West-southwesterly winds 10-15mph, isolated gusts up to 20-25mph.

Chance of cloud-free hill tops above 800m: 40% in the west at first, 80% in the east. Improving to 90% everywhere by midday.

Low Cloud and visibility: Banks of low cloud affecting western upslopes through the morning, giving some poorer visibilities, especially in any rain. Cloud lifting above summits through the morning, with clear skies developing at times through the afternoon and visibilities markedly improving.

Temperature: **Valleys:** Plus 12 Celsius, rising to Plus 17 Celsius.
At 800m: Plus 6 Celsius, rising to Plus 9 Celsius.
Freezing level: Above summits.
